Profile Summary

Building and scaling high performance full stack platforms from **0 → production → scale**. Leading development of **multiple production systems** serving thousands of users, with strong expertise in **system design, backend scalability, and performance engineering**. Building AI-integrated, real-time, and full-stack side projects outside of work spanning multiplayer systems, LLM pipelines, and mobile apps.

Work Experience

Founding Software Engineer, Senior Software Engineer 01/2024 – 08/2024, 02/2025 – Present | Bangalore

Ivory (Nostalgic Dust Pvt Ltd)

- Architected and delivered **5 full stack healthcare agetech platforms** from **0 → production**, spanning **D2C, B2B SaaS, CRM, Internal Tools, and clinical research systems** owning **end-to-end architecture** across **frontend, backend, data models, and infrastructure**.
- Built and scaled a D2C cognitive wellness platform used by **60K+ users**, and a B2B SaaS platform for **200+ healthcare partners** covering patient management, assessments, and **real-time monitoring**.
- Led backend and **system performance optimization** during rapid user growth **reducing API/DB latency** via **query optimization** and **caching**, **eliminating downtime** alongside **frontend optimizations** (bundle splitting, lazy loading, image CDN) that improved load times and UX.
- Built an internal **AI Slack assistant** with live context of **20+ company repositories**: a **self-updating RAG pipeline** (repo → Graphify code parsing → knowledge graph → graph.json/MCP → LLM) that re-indexes on every commit, giving engineers **instant code-aware Q&A directly in Slack**.
- **Worked directly with founders** and domain experts to translate ambiguous product ideas into scalable production systems.

Founding Software Engineer 08/2024 – 02/2025 | Bangalore

Almond (B2B Digital Trade Platform Startup)

- Built and shipped an **all-in-one B2B digital trade platform** from scratch as a founding engineer, using **Next.js, PostgreSQL, Drizzle ORM, and tRPC** owning **system architectural design** and **full-stack execution** end-to-end.
- Designed and implemented backend systems and APIs to support **high-concurrency business workflows**, translating ambiguous founder vision into scalable technical architecture.
- Delivered a platform that helped businesses save time, reduce costs, and scale operations.

Member of Technical Staff 1 12/2022 – 01/2024 | Hyderabad

Whitehat Jr (Byjus)

- Delivered **high-impact features** and **platform improvements** to live classes across WhiteHat Jr, Aakash, and BYJU'S Neo InClass teams, building **high-performance backend APIs in Node.js**.
- Implemented **frontend improvements** in React.js that **reduced user drop-offs by 45%** and significantly **improved live class engagement**.
- Led **end-to-end design, development and delivery of 10+ PRDs**, translating complex business requirements into **technical design, implementation, and production rollout.**

Flagship Side Projects

GeoHide : Real-Time Multiplayer Web & Mobile Game

- Built a **Street-View-based multiplayer hide-and-seek game** with a **server-authoritative Socket.io game engine** (lobby, hiding, guessing, and reveal phases) and **anti-cheat coordinate handling**; shipped a companion **React Native app for iOS/Android**.
- Ran a **custom Node server** alongside **Next.js** for **stateful real-time sessions**, containerized with **Docker** and deployed on **Railway**.

Kairos : Multi-Tenant AI Sales Enablement Platform

- Built a **multi-tenant SaaS** that **extracts customer objections** from call transcripts and drafts **AI rebuttal playbooks**, using a **provider-agnostic LLM abstraction layer** (Groq, Anthropic, OpenAI, Gemini) with **encrypted BYOK key storage**.
- Implemented **geo-optimized field visit routing** (k-means clustering + Google Routes API) and an **offline-first capture flow** for reps without connectivity, backed by **automated tests across 32 routes**.

Education

Vellore Institute of Technology (VIT University) 2019 – 2023 | Vellore

Bachelor of Technology in Computer Science Engineering

- CGPA: 8.77
- Published a research paper on **Symmetric Encryption using Artificial Neural Network, Binary Tree Traversal, and Interleaving Salting**
- Published another research paper on **Predicting Cardiovascular Disease (CVD) Risk Over Time Utilizing Multifaceted Health and Lifestyle Parameters**

Skills

React.js, Next.js, TypeScript, JavaScript (ES6+), Node.js, Redux, Zustand, tRPC, Socket.io, PostgreSQL, Drizzle ORM, MongoDB/Mongoose, SQL, Firebase, AWS, Docker, REST/API design, LLM integration (OpenAI, Gemini, Groq), React Native, HTML5, CSS
